Status	Finished
Started	Tuesday, 20 October 2026, 9:21 AM
Completed	Tuesday, 20 October 2026, 9:28 AM
Duration	6 mins 56 secs
Grade	**14.00** out of 15.00 (**93.33**%)

Question **1**

Complete

Mark 1.00 out of 1.00

Which sorting algorithm is based on repeatedly dividing the list into halves?

a. Bubble Sort
b. Insertion Sort
c. Quick Sort
d. Merge Sort

The correct answer is: Merge Sort

Question **2**

Complete

Mark 1.00 out of 1.00

Which Python function would you use to sort a list in-place?

a. sorted()
b. sort()
c. order()
d. arrange()

The correct answer is: sort()

Question **3**

Complete

Mark 1.00 out of 1.00

Why is sorting important for selection operations?

a. It makes the data unsorted
b. It complicates the selection of items
c. It makes it easier to select items based on their relationship to the rest of the items
d. It slows down the process

The correct answer is: It makes it easier to select items based on their relationship to the rest of the items

Question **4**

Complete

Mark 1.00 out of 1.00

Which sorting algorithm involves comparing elements and swapping adjacent items that are out of order?

- a. Bubble Sort
- b. Linear Search
- c. Merge Sort
- d. Binary Search

The correct answer is: Bubble Sort

Question **5**

Complete

Mark 1.00 out of 1.00

Which sorting algorithm is known for its simplicity and sequential comparison of elements?

- a. Merge Sort
- b. Heap Sort
- c. Quick Sort
- d. Bubble Sort

The correct answer is: Bubble Sort

Question **6**

Complete

Mark 0.00 out of 1.00

Very slow way of sorting is_____

- a. Insertion sort
- b. Quick sort
- c. Bubble sort
- d. Heap sort

The correct answer is:
Insertion sort

Question **7**

Complete

Mark 1.00 out of 1.00

Which built-in Python function is used to sort data?

- a. sorted()
- b. sort()
- c. order()
- d. arrange()

The correct answer is: sorted()

Question **8**

Complete

Mark 1.00 out of 1.00

What is the primary advantage of the divide-and-conquer approach in sorting algorithms?

- a. It avoids the need for recursion
- b. It only works on small datasets
- c. It simplifies the sorting process by using only one pass
- d. It allows for efficient parallel processing and sorting of data

The correct answer is: It allows for efficient parallel processing and sorting of data

Question **9**

Complete

Mark 1.00 out of 1.00

In Merge Sort, what happens after dividing the input into smaller parts?

- a. Each part is sorted independently
- b. The parts are merged without sorting
- c. The parts are ignored
- d. Each part is searched for a specific element

The correct answer is: Each part is sorted independently

Question **10**

Complete

Mark 1.00 out of 1.00

What does the Bubble Sort algorithm primarily focus on during each pass?

a. Sorting the entire list in one pass
b. Bubbling up the smallest element
c. Bubbling up the largest element to its correct position
d. Dividing the list into halves

The correct answer is: Bubbling up the largest element to its correct position

Question **11**

Complete

Mark 1.00 out of 1.00

_____is putting an element in the appropriate place in a sorted list yields a larger sorted order list.

a. Insertion
b. Selection
c. Distribution
d. Extraction

The correct answer is:
Insertion

Question **12**

Complete

Mark 1.00 out of 1.00

Why is it advantageous to sort data before performing duplicate analysis?

a. It complicates the analysis process
b. It makes the analysis slower
c. It has no effect on the analysis process
d. It allows for quicker identification of duplicates

The correct answer is: It allows for quicker identification of duplicates

Question **13**

Complete

Mark 1.00 out of 1.00

Which of the following best describes the process of Merge Sort?

a. It compares adjacent elements and swaps them if necessary
b. It divides the list into two halves, sorts each half, and then merges them
c. It builds a sorted array one element at a time
d. It repeatedly finds the minimum element and moves it to the sorted part of the list

The correct answer is: It divides the list into two halves, sorts each half, and then merges them

Question **14**

Complete

Mark 1.00 out of 1.00

In Merge Sort, what happens after the two halves of the list are sorted?

a. They are compared element by element
b. They are combined to form a single sorted list
c. They are split again into smaller sublists
d. They are discarded

The correct answer is: They are combined to form a single sorted list

Question **15**

Complete

Mark 1.00 out of 1.00

Algorithm design technique used in merge sort algorithm is

a. Backtracking
b. Divide and conquer
c. Dynamic programming
d. Greedy method

The correct answer is:
Divide and conquer
