Completed	Tuesday, 20 October 2026, 9:19 AM
Duration	5 mins 12 secs
Grade	**12.00** out of 15.00 (**80**%)

Question **1**

Correct

Mark 1.00 out of 1.00

In which situation is linear search more efficient than binary search?

- a. When the list is small and unsorted ✓
- b. When the list is large and unsorted
- c. When the list is small and sorted
- d. When the list is large and sorted

Question **2**

Correct

Mark 1.00 out of 1.00

Finding the location of a given item in a collection of items is called

- a. Finding
- b. Searching ✓
- c. Mining
- d. Discovering

Question **3**

Correct

Mark 1.00 out of 1.00

_____ search takes a sorted/ordered list and divides it in the middle.

- a. Hash
- b. Linear
- c. Binary ✓
- d. Both (1) & (3)

Question **4**

Correct

Mark 1.00 out of 1.00

In _____ checks the elements of a list, one at a time, without skipping any element.

a. Both (1) & (3)

b. Hash search

c. Binary search

d. Linear search ✓

Question **5**

Correct

Mark 1.00 out of 1.00

Which of the following is a limitation of binary search?

a. It is slower than linear search for small lists

b. It requires the list to be sorted ✓

c. It can only be applied to large lists

d. It does not work with negative numbers

Question **6**

Correct

Mark 1.00 out of 1.00

In binary search, how is the middle element determined?

a. By starting from the first element

b. By dividing the list length by two ✓

c. By comparing each element sequentially

d. By using a hash function

Question **7**

Incorrect

Mark 0.00 out of 1.00

Given an array arr = {45,77,89,90,94,99,100} and key = 99; what are the mid values(corresponding array elements) in the first and second levels of recursion?

a. 89 and 94

b. 89 and 99

c. 90 and 94 ✗

d. 90 and 99

Question **8**

Correct

Mark 1.00 out of 1.00

Which of the following is not a limitation of binary search algorithm?

a. There must be a mechanism to access middle element directly

b. Binary search algorithm is not efficient when the data elements more than 1500 ✓

c. Requirement of sorted array is expensive when a lot of insertion and deletions are needed

d. Must use a sorted array

Question **9**

Correct

Mark 1.00 out of 1.00

Which of the following is a type of searching method?

a. Bubble search

b. Linear search ✓

c. Merge search

d. Quick search

Question **10**

Incorrect

Mark 0.00 out of 1.00

What happens in a binary search if the list has an even number of elements?

a. The higher middle element is chosen as the middle element

b. The lower middle element is chosen as the middle element ✗

c. The search stops

d. The middle element is chosen randomly

Question **11**

Correct

Mark 1.00 out of 1.00

In linear search, how is the element searched?

a. By sorting the list first

b. By using a hash function

c. By dividing the list into halves

d. By comparing each element in the list sequentially ✓

Question **12**

Correct

Mark 1.00 out of 1.00

In the context of searching, what is a successful search?

a. When the search algorithm finishes
b. When the element is found in the list ✓
c. When the list is sorted
d. When the list contains duplicate elements

Question **13**

Incorrect

Mark 0.00 out of 1.00

Which of the following is not the required condition for a binary search algorithm?

a. There should be direct access to the middle element in any sublist
b. The list must be sorted
c. Number values should only be present ✗

Number values should only be present

d. There must be a mechanism to delete and/or insert elements in the list

Question **14**

Correct

Mark 1.00 out of 1.00

In linear search, if the target element is not found in the list, what is the result?

a. The first element is returned
b. An error is raised
c. The search is considered unsuccessful ✓
d. The last element is returned

Question **15**

Correct

Mark 1.00 out of 1.00

In binary search, if the target element is less than the middle element, where does the search continue?

a. In the entire list
b. At the beginning of the list
c. In the right sublist
d. In the left sublist ✓
